WRITE FOR PRICES ON LARGER QUANTITIES

CARPATHIANS PRODUCE LARGE CROPS THAT ARE EASY TO HARVEST. One of our customers reports that an eight-year-old tree produced a bushel of nuts. Trees start to bear from four to seven years after planting. Carpathians are so new that production records are not available for older trees. Probably 3-4 bushels of shelled nuts would be an average yield for 15 year old tree. At maturity the hull opens and the nuts fall to the ground. Plant two trees to insure pollination.

PLANT MILLER'S GENUINE PURE STRAIN TREES. Growing Carpathian Walnuts is a specialty with us. We have spent 10 years in research in order to produce the finest trees possible. We have our own grove so that we can pass on the knowledge we gain in growing Carpathians under actual field conditions. Our high producing hardy strain of Carpathians is one of the best in America. Our original planting stock came from Europe. The trees from which we get our planting stock are 12 to 15 years old and are outstanding producers of fine nuts.

NEW WEEPING RED JADE

(Plant Pat. No. 1497)

A completely new and unusual tree of rare beauty. The most attractive small weeping tree of all. Gorgeous color interest both spring and fall. In spring the branches are clothed in clouds of fragrant white blossoms. From fall into early winter small glistening bright red Apples cover the branches. This fountain of crimson splendor adds striking color to fall and winter landscapes. Our picture shows the fruit, not blossoms. This unusual and beautiful tree will be the high point of interest in your planting. A thing of beauty for all to see and enjoy. Mature height we think will be about 8 ft. and perhaps six feet wide. Extremely winter hardy, easy to grow. Plant it as a specimen so this brilliant creation can show to its best advantage. Originated and patented by Brooklyn Botanic Gardens. **Sturdy trees, 3 ft. and up, \$5.95; 4-5 ft., \$6.95 each.**

CARPATHIAN WALNUTS

The Greatest Tree Find of the Century

FAST GROWING — HARDY. Carpathians will survive 25-30 below zero with no dieback or winter injury. Carpathians grow fast. The first year while becoming established growth is only medium. Once established they make as much as 4-5 ft. of new growth each year. They grow best on deep fertile clay, loam or sandy soils.

CARPATHIAN WALNUTS PRODUCE LARGE FINE FLAVORED NUTS. Nuts are almost identical to California walnuts. Many are much larger and we think better flavored. The thin shelled nuts crack easily in halves and whole. Kernels have a delicious flavor, free from bitterness with an attractive light color.

THE PERFECT SHADE TREE. Beautiful dark green tropical foliage. No roots near the surface. Grass grows right up to the trunk. Grows in beautiful symmetrical form with strong sturdy limbs that won't break from wind or ice. Fast growing, cool dense shade. Free from disease.

Rev. Paul Crath while doing missionary work discovered these hardy nut trees growing in the Carpathian Mountain Highlands. Winters are most severe there. Temperatures of 30 below zero are common, yet these trees were producing large crops of large thin shelled nuts. Rev. Crath carefully selected nuts from 50 trees that were producing the largest and best flavored nuts. He brought these back to his home in Toronto, Ontario and planted part of the nuts in his garden. The rest were sent to interested growers in America.

Red Jade

J. E. MILLER NURSERIES
CANANDAIGUA, NEW YORK

PLANT NUT TREES For

FILBERTS

(Hazelnuts)

Filberts are easy to grow and will succeed wherever it is possible to grow Peaches. Fully grown trees compare in size with a Peach or Plum tree. They are free from disease and require no spraying. The trees start to bear the second or third year after planting and our named varieties produce large nuts that are easy to crack, high in food value and very tasty. Nuts mature in early September and drop free from the husk.

Planting and Care. Filberts sucker freely and these must be removed from the base of the tree or a bush will result. Plant the same as a fruit tree. Filbert trees are not self-fertile and more than one variety must be planted or no nuts will be produced. Cultivate or mulch the trees for the first few years.

BARCELONA. Nut very large, round, fine flavored. Tree very vigorous and productive. An important commercial variety in Oregon. Ripens early September.

New ROYAL. Nut even larger than Barcelona. Very productive. Nut cracks easily and is of finest quality. A fine pollinator for Barcelona. Nuts mature early Sept. This new variety is really outstanding.

2 to 3 ft. trees, \$2.95 each; 3 for \$8.25. 3 to 4 ft. trees, \$3.25 each; 3 for \$9.00.

THOMAS BLACK WALNUT

Large, Thin Shell—Cracks Easily—Delightful Flavor

Our native Black Walnuts are just about the tastiest of all nuts but the nuts are often small. The meats are so hard to extract that it seems hardly worth the effort. Thomas was selected from thousands of trees growing in our country because it produces large nuts that crack easily. Here is why Thomas is one of the most valuable nut trees you can plant. The nuts are uniformly large with a thin shell that cracks easily. The meats are large and plump, with a delightful flavor found only in the Black Walnut. They come out of the shell easily in halves and quarters. The tree grows rapidly. Our trees are grafted to retain all of these desirable characteristics. Grafting also has the effect of producing early bearing in Black Walnuts. Grafted Thomas Black Walnuts start bearing the second or third year after planting and are soon in good production. Trees should be planted 40 to 50 feet apart. They grow best on a rich moist soil but will grow on any deep soil of average fertility. Two or three trees will make a nice home planting. If you have room plant more because of the big plump meats that come out so easily, sell for high prices and make an attractive profit-making project.

PRICES GRAFTED TREES

3 to 4 ft., \$3.75 each; 3 for \$10.75; 6 for \$18.75. 2 to 3 ft., \$3.00 each; 3 for \$8.55; 6 for \$16.50.

for the Average Family**

Cool Summer Shade-Tasty Nuts in Autumn

NEW, HARDY CHINESE CHESTNUT TREES

Welcome Shade—Fine Flavored Nuts

A hardy, blight resistant tree that the U. S. Dept. of Agriculture introduced here from China to take the place of our native American Chestnuts destroyed by Chestnut blight. Chinese Chestnuts average larger than our native varieties and actually are better in quality. They grow quite rapidly in a spreading form and produce nuts in about three to four years. Trees should receive clean cultivation until August 1st or use heavy mulch treatment. Use no fertilizer the first year. Subsequent years, fertilize, cultivate or mulch as for fruit trees. Two or more trees required to produce nuts. Spring planting best. Plant a few trees this spring. The nuts are really delicious and the trees ornamental.

	Each	3	10
3 to 4 ft.	\$3.25	\$8.95	\$27.00
2 to 3 ft.	2.50	6.00	18.00

Butternut Cluster on Tree

Butternut

AMERICAN BUTTERNUT

A Long Lived Decorative Tree for Garden or Park Areas

One of the most tasty of our native nuts. Everyone likes them for baking, confections and eating fresh. A heavy crop of nuts is produced each year by this hardy member of the Walnut family. Attractive foliage and spreading top provide abundant shade. Bears young and tolerant of moist soils. Plant two trees for better nut production. 4-5 ft. trees, \$2.50 each; 2 for \$4.50.

RECOMMENDED PLANTING DISTANCES FOR NUT TREES

Black Walnut	35-40 ft. apart
Carpathian Walnut	30-35 ft. apart
Filberts	18-20 ft. apart
Chinese Chestnut	30 ft. apart
Hall's Almond	18-20 ft. apart
Butternut	25-30 ft. apart

HALL'S FRUITING ALMOND

The original tree was discovered near Independence, Kansas; it has produced regular crops of nuts for long enough now so its hardiness and productiveness is well established.

The Almond is a very close relative of the Peach, and the blossoms, foliage, and growth habits are much the same. Our trees are budded. Peach-like fruits open in Sept. and the nut falls free. For better crops of nuts interplant a Peach for pollination.

Hall's Fruiting Almond grows into a shapely ornamental tree besides bearing regular crops of tasty, high quality nuts that are the equal of any purchased in the stores. In the spring the branches are covered with beautiful blossoms followed by the many fruits that develop into nuts. It is a very fast growing tree and starts bearing two to three years after planting. Nuts ripen from late August through September. Hall's Almond will grow and produce well wherever Peaches can be grown. It will stand as much cold as a Peach tree without injury. Soil requirements are the same as for a Peach and it will grow and bear well on any well drained soil of average fertility. Plant and care for them the same as you would a Peach tree.

Reserve a place in your home planting for this most unusual and beautiful tree. You will not only have the pleasure of watching it grow but the many crops of delicious nuts will pay for the cost of the tree many times over. Prices: 3 to 4 ft. trees, \$2.95 each; 2 for \$5.60. 4 to 5 ft. trees, \$3.25 each; 2 for \$6.20.

Plant A Few Chestnuts This Year

We get glowing reports from all of the Eastern states and it seems even better suited to the Southern states. A few trees that are very easy to grow will easily supply the average family with all they can eat and as the trees grow older there should be some to sell. It can be classed as a dual purpose tree, furnishing nice shade and a sweet, fine flavored nut. There are no important insect enemies and except for cultivation very little care is required. It is practically immune to the Chestnut blight that killed all of our native Chestnuts, and we are very fortunate to have such a fine tree as a replacement.

Don't confuse it with the coarse, poor quality Italian Chestnut sold in stores. It is so much better there is really no comparison. Why not plant a few trees along the farm fence row or in the back yard to supply both shade and fine, tasty nuts. See page 2 for colored picture.

Miller's BETTER GRAPES

Grown in the Finger Lakes Grape Region

MID-SEASON GRAPES

(Sept. 15-25)

New York Muscat

✓ **DELAWARE.** Clusters medium, compact, attractive. Fruit excellent in quality, perhaps the best of all red Grapes. Vines hardy and productive. Vigorous on good soils. No planting is complete without a few vines of this fine variety.

✓ **NIAGARA.** Best known white Grape. Clusters and berries large. Quality very good, sweet, juicy. Vine vigorous, hardy, productive.

✓ **CONCORD.** The most widely grown commercial blue variety. Fine for jellies and Grape juice. Vine very vigorous, hardy and productive.

LATE GRAPES (Sept. 25-Oct. 10)

✓ **SHERIDAN.** The best late blue Grape and one of the finest of all Grapes. Will keep in good condition until after Christmas. Clusters and berries are very large, compact. Quality excellent. Very sweet, delicately flavored. Vigorous, hardy and so productive that it requires close pruning to prevent overbearing.

✓ **CATAWBA.** Clusters large, well formed. Quality very good. One of the best late red Grapes. Keeps well after picking until late December.

✓ **GOLDEN MUSCAT.** Produces huge clusters of golden delicious fruit, some weighing as much as 7 lbs. Oval berries, beautiful light golden. Quality excellent, sweet, juicy, highly flavored. Vine vigorous and hardy.

PRICES—Guaranteed to Grow Stock

Golden Muscat, Delaware, Niagara, Concord, Sheridan and Catawba, 2-yr., No. 1: 75c each; any 3 for \$1.95; 10 for \$5.45; 100 for \$24.50, not prepaid in 100 quantities.

NEW YORK MUSCAT. Outstanding new Muscat type just named and introduced by N. Y. State Exp. Sta. Pleasingly sweet yet has that distinctive Muscat flavor found only in European type grapes. Clusters are good sized, loosely formed. Berries medium sized, reddish black, attractive. Ripens early Sept. Free from disease in our planting. Moderately hardy. 15 degrees below zero may cause winter injury. Makes a fine red Muscatel wine. A fine all purpose grape. One of the best for the home garden.
Select 1-Yr. vines, \$1.95 each; 3 for \$5.55.

NEW HIMROD SEEDLESS GRAPES

This new seedless Grape has large handsome clusters turning golden yellow when fully ripe. Clusters are loose, berries medium sized, entirely seedless, crispy sweet throughout with a fine flavor. Berries can be eaten just like California Seedless with no seeds to bother. We think they are much better flavored and sweeter than California Seedless. Fruit ripens late August or about a week later than Interlaken Seedless. This is a sister seedling of Interlaken Seedless and originated at the New York State Exp. Station. It is hardier than Interlaken and not prone to winter injury. The vine is productive. Mature vine will yield 10-15 pounds of Grapes per vine. **No. 1 vines, \$1.95 each; 3 for \$5.55; 6 for \$9.95.**

Famous For Vigor-Quality

Better because 75 years of accumulated knowledge goes into the production of strong, heavy rooted stock that we believe to be the finest available. Grapes are a specialty with us. We devote more than 15 acres to commercial Grape production with more than 100 varieties in our test vineyard. From this large list we have selected only the best for home gardens and commercial plantings. Every variety listed has some special merit. We have Grapes for short growing seasons such as Ontario, Grapes that require no spraying for fungus diseases such as Steuben, Buffalo, and Ontario. Also all of the time-tested varieties like Delaware and Concord. In short we have made it possible for everyone to grow good Grapes in the home garden. But to make your success doubly sure we include with every order complete information on Grape growing from planting to harvest.

✓ NEW SCHUYLER GRAPE

An entirely new type blue Grape. Originated very recently at the N. Y. State Experiment Station. A cross of California Zinfandel Grape with the fine variety Ontario. Clusters are large with berries larger than Concord. A beautiful light blue bloom covers them, making them most attractive. The berries are solid and meaty, sweet throughout, with a delicate vinous flavor. One of the heaviest producing varieties we have ever tested. Vines in our vineyard not yet three years of age produced 5-6 pounds of Grapes. It is so productive that it must be pruned carefully to prevent overbearing. Fruit matures early. Ripens late August. Vine is hardy as Delaware. **\$1.25 each; 3 for \$3.50; 10 for \$10.00.**

Delaware

Ontario

Van Buren

✓ VERY EARLY GRAPES

(August 20-27)

✓ **ONTARIO.** New, early white Grape. Free from disease, requires no spraying. Clusters large, loosely formed. Berries above average, light yellow with pleasing sweet and distinctive flavor. A perfect variety for home garden. **2-yr., 75c each; 3 for \$1.95; 10 for \$5.45; 100 for \$24.95.**

✓ **VAN BUREN.** New. This is the Grape to plant where growing seasons are short and winters severe. It has produced good crops of fruit after 30 below zero. Growth does not start until late in the spring so it seldom is injured by spring frosts. Ripens about September 1st or three to four weeks before Concord. Clusters are large, compact, well formed, beautiful deep purple. Medium sized berries are sweet and have a fine flavor. Makes fine jellies and juice because it is of the Concord type with pronounced Grape flavor. Vine is vigorous and grows well even on poor soil. **2-yr. vines, 85c each; 3 for \$2.40; 10 for \$7.00.**

✓ **SENECA.** This new California, European type white Grape represents a great achievement in modern plant breeding. Fruit is firm, crisp, delicately flavored and may be eaten with skin as California Grapes. The vine is as hardy as our native Grapes. **2-yr., No. 1, 90c each; 3 for \$2.40; 10 for \$7.50.**

✓ EARLY GRAPES (September 1-10)

✓ **BRIGHTON.** A sweet, highly flavored red Grape of excellent quality. Clusters are large, berries medium. Very vigorous, hardy, productive. Needs other varieties planted with it because of self-sterility. We recommend Brighton and Delaware as about the best of the red Grapes.

✓ **Prices: Brighton, Fredonia, 2-yr., No. 1 vines, 75c each; any 3 for \$1.95; 10 for \$5.45; 100 for \$24.50.**

✓ **FREDONIA.** Large, compact clusters and large berries covered with a beautiful blue bloom. Very productive, hardy, vigorous. Quality good.

✓ **BUFFALO.** Originated by the N. Y. State Experiment Station. Buffalo is our finest flavored early blue Grape. It has a delicious flavor that defies description. Juicy, sweet, with melting, tender flesh and delightful aroma. Not only is the quality of the best, but the vine is a heavy and regular bearer. Clusters and berries are large, loosely formed, and covered with a delicate blue bloom. A very vigorous grower, hardy, and free from disease. We have grown it to perfection without spraying in our test vineyard. Makes fine Grape juice and jellies.

PRICES—Buffalo

Select, 2-yr. vines: 95c each; 3 for \$2.55; 10 for \$7.95; 25 for \$14.25; 50 for \$23.00.

The Extra Sweet
Buffalo Grape

Steuben

graph taken at
Miller Nurseries

Plant Miller's **GRAPES** **NEW STEUBEN**

A New Creation of the
New York State Experimental Station

Never before have we grown a Grape of such exquisite flavor. Melting, tender, sweet with a delicate perfume-like flavor. Grows huge, perfectly formed, long, slender clusters. Not only is the fruit of outstanding quality, but the vine is very hardy. Produced a full crop after 20 below zero. No spraying necessary. It is absolutely free from rot and mildew in our planting. Ripens a few days before Concord, but keeps until Christmas. One of the best blue Grapes. We were the first nursery in the U. S. to list this superb variety. **Select, 2-yr., No. 1 vines, each \$1.50; 3 for \$3.95; 10 for \$11.50; 50 for \$35.00; 100 for \$65.00.**

**SPECIAL NEW
VARIETY OFFER**

1 Steuben 1 Interlaken
1 Alden Seedless

All three for
Only \$4.65

New INTERLAKEN SEEDLESS

Reserve a special place in your garden for this delicious new seedless Grape. Here's why. Now you can grow right in your own garden luscious seedless Grapes that are better than anything sold in stores. The plant breeders at the N. Y. State Experiment Station crossed the California Thompson Seedless with our own Ontario and hit the jackpot. Clusters and berries are medium size but the quality is beyond description, and even better than the famous California Thompson Seedless. The amber colored berries are crisp, solid, sweet throughout, but can be eaten whole like California Grapes with no seeds to bother. Fruit has a delightful vinous aroma with a refreshing tangy flavor. It ripens the earliest of any of the 100 odd varieties growing in our test vineyards. It is fully ripe here by August 15. The vine is hardy to 10 degrees below zero and is vigorous and free from disease. **Prices: Select vines, \$1.50 each; 3 for \$4.20; 6 for \$8.10.**

Interlaken in Our Vineyard in August

Alden in Our Vineyard in September
Berries large—often 1 in. long

ALDEN GRAPE

Alden is so good it defies description. Delicious is not the word to tell the true story—it's more than delicious, it's super-delicious. The oval, blue berries are as big as Damson Plums, many over an inch long. They are solid and crisp, juicy, sweet throughout, with a texture identical to California or European type Grapes, but better in quality because it has the distinctive, delicate flavor and aroma of our native Grapes. Alden is truly a true California Grape growing on a hardy native vine. Clusters are long and loosely formed and weigh up to 1 1/2 lbs. Growth habits are about perfect. It is vigorous, free from disease and very productive. It is so productive that it must be pruned to short canes to prevent overbearing. We have recorded more than 25 lbs. of fruit from one vine but for best quality 15 to 20 lbs. is about right. Best of all, the vines are hardy and will produce big crops year after year, even after sub-zero temperatures. We would say it is hardy to 15 or 20 below zero. Fruit ripens in our vineyard about Sept. 20-25th, or a few days before Concord. Keeps in good condition for a long time. Credit the able plant breeders at the New York State Experiment Station with another smashing triumph in originating this new super Grape. Miller's are first again in listing Alden. Our supply is very limited. Order early. **Prices: 2-yr., No. 1 selected vines, \$1.95 each; 3 for \$5.55; 6 for \$9.95; 10 for \$15.00.**

Miller's RASPBERRIES

BEST NEW and OUTSTANDING KINDS

BRISTOL One of the Best in Black Raspberries

The best of any of the new varieties. Berries large, glossy, firm, attractive, and of excellent quality. Our planting has been free from disease and very productive. In our test planting Cumberland, Bristol, and Morrison are growing in rows next to each other. Bristol outyields them all, almost 2 to 1. Quality is just as good and the plants are more upright and easier to pick. **Prices No. 1 plants, postpaid: 10 for \$2.75; 25 for \$4.95; 50 for \$8.50; 100 for \$14.95; 250 for \$30.95.**

Bristol
Black
Raspberry

New AMBER GOLDEN RASPBERRY

Highly Flavored—Delightfully Different

Here is the finest quality Raspberry in existence today. Fruit experts agree that no other variety can equal Amber for flavor, sweetness and all around good quality. The berries are uniformly large, maintaining their size throughout the ripening season with no crumbling. This fine variety was originated at the N. Y. State Experiment Station, at Geneva, N. Y. The berry is large and equal in size to the largest Raspberries. The shape is long and tapering, amber colored, juicy, tender, melting, sweet and highly flavored. The plants grow unusually tall, vigorous and upright. They are very hardy, productive and easy to grow in any good soil. If you want extra special quality plant Amber.

Raspberry

New Durham A 2 Crop Berry

New DURHAM EVERBEARER

12 for \$3.75; 25 for \$7.00; 50 for \$13.50; 100 for \$24.95

The University of N. H. originated this fine new berry to fill the need for a highly productive, two crop berry that would ripen the fall crop before fall frosts occur. Durham is one of the best in this respect. Hardy to 30 below zero, the plants are more vigorous than any other berry, grows rapidly and starts producing right away. The fruit is large, firm, and highly flavored with attractive red color. First berries ripen July 1st and the fall crop in early September.

Here's a new wrinkle if you prefer a tremendous fall crop. In November after the plants are dormant, cut all growth off to within 2-3 inches of the ground. This eliminates most of the work in Raspberry growing, such as pruning, trimming, and all fungus disease that might be carried over in the canes. In the spring your plants will make a tremendous growth. All of the vigor and vitality goes into producing a bumper fall crop. This crop is borne on the tips of the new canes in large clusters, making picking easy. Another advantage is that the fall crop is much better in quality and sells for a much higher price. Your fall crop will start ripening about August 20th under this system and continue through October. Don't miss planting a few Durham this year.

Red Rich STRAWBERRY

Everbearing

(Plant Patent No. 993)

The new wonder everbearing Strawberry. Unsurpassed for freezing. RED RICH is a deep red clear through. It possesses an abundance of natural sugar — less of yours for preparation. Solid and firm, RED RICH holds its natural eye appealing qualities when thawed — it won't mush up. Too, it makes a better dessert or preserves because it is big, red, and sweet. First crop ripens in late June. Fall crop begins late August with delicious berries until frost. The finest quality of any Strawberry we sell.

THE LEADING BLACKBERRY

BAILEY Improved Blackberry

A delicious new Blackberry we think is best of all Blackberries. Berries are large, firm, coreless, sub-acid with a true pleasing Blackberry flavor. Sugar and acid are perfectly balanced to make it a real taste treat. Fruit ripens about July 1st to 15th. Plants are vigorous, productive and hardy. This variety was selected as having great promise both for home use and commercial plantings. Originated at the New York State Experiment Station. Plant a few this year. The abundance of berries produced will pay for the plants many times over.

Prices: No. 1 plants, 6 for \$1.95; 12 for \$3.75; 25 for \$7.25; 50 for \$13.50; 100 for \$24.95.

NEW PURPLE AUTUMN A New Purple Everbearing Raspberry

Purple Autumn Raspberry

This sensational plant discovery from the Illinois Experiment Station marks another first in development of new, outstanding fruits. It is the first everbearing purple berry ever to be named. Now you can enjoy fruit of exquisite flavor from July to November. Here is why Purple Autumn will be a most valuable addition to your garden. The berries are larger than any other variety. Fruits are firm, attractively colored, delightfully sweet and highly flavored. The first crop ripens about July 1st and lasts three to four weeks. The fall crop ripens about September 10th and continues until frost. In the latitude of southern Pennsylvania the fruit would ripen about two weeks earlier. Plants are hardy, vigorous, free from disease and easy to grow. Purple Autumn is the ideal berry for the home garden because a few plants will produce an abundance of fruit in small space.

Prices: 6 for \$1.95; 12 for \$3.85; 25 for \$7.25; 50 for \$13.75; 100 for \$24.95.

Your Own **ASPARAGUS**

Every Year!

One of the most beautiful of all vegetables. Rich in minerals and vitamins. Easy to grow. Once established produces annual crops for years. Makes a delicious frozen product. Available spring only.

MARY WASHINGTON

The best variety at the present time. Rust-resistant, strong grower, extra large size stalk, rich and tender, fresh green color. Rated as excellent for quick freezing.

Asparagus roots, 2-yr., No. 1, 25 for \$2.25; 50 for \$3.75; 100 for \$6.00; (500 for \$18.75, not prepaid).

NEW VALENTINE RED RHUBARB

Finest of all the red Rhubarbs. Beautiful dark red stalks that make highly colored delicious sauce and pies. Grows faster and stalks can be cut a year sooner than older kinds. Not as acid as green stalked varieties. Requires less sugar. The best of any variety in appearance, quality and flavor. 95c each; 3 for \$2.70; 10 for \$6.95.

BLUEBERRIES

An American Delicacy
BEST CULTIVATED VARIETIES FOR HOME USE

1. Fruit 5 Times as Large as Wild Varieties.
2. Bear Early, Usually the 2nd Year
3. Bears Big Crops, up to 6 Qts. per Bush When Full Grown.
4. Once Planted—Lasts a Lifetime.

✓ **CONCORD.** Early to midseason. Plants tall, vigorous, upright. Fruits large, light blue, attractive and of the best quality. Borne in clusters resembling those of Concord Grapes.

✓ **STANLEY.** New superior variety now considered the best in its season of ripening by both home and commercial growers. Tall vigorous plants, very productive, fruit large, perfumed and most delicious in flavor.

✓ **JERSEY.** Late. Bush grows tall, well shaped, vigorous and productive. Fruit is large, attractive, firm, quality best. We suggest planting at least one plant of each variety to insure a supply of fruit over a long season and for proper pollination.

BLUEBERRY PRICES — GUARANTEED TO GROW STOCK

3-yr., 12-18 in., \$1.40 each; 3 for \$3.30; 10 for \$9.95; 100 for \$70.00. 3-yr., 18-24 in., \$1.75 each; 3 for \$4.50; 10 for \$13.95; 100 for \$95.00, not prepaid in 100 quantities.

THREE NEW BLUEBERRIES

These outstanding new varieties from the U. S. Dept. of Agriculture are well worth trying. In many ways they are superior to the older kinds having extra large berries of exceptionally fine flavor. The plants grow vigorously and have been free from disease.

✓ **NEW BLUERAY.** One of the earliest ripening of all. Berries are large, a beautiful light blue with a distinctive pleasing flavor. Grows vigorously and is hardy and free from disease.

Blueberries—Habit of Growth

Concord
Blueberries

✓ **NEW BERKLEY.** Grows the largest berry of all and ripens about a week after Blueray. The large, light blue, attractive berries are exceptionally fine flavored, firm, and produced in great clusters. A vigorous growing, hardy, productive plant.

✓ **NEW HERBERT.** One of the finest cultivated Blueberries ever to be named. Its flavor is just about perfect. Just sweet enough, yet has enough tart to bring out that delicious Blueberry flavor. Berries of largest size, nearly 1 inch in diameter, produced in tremendous clusters. These clusters are produced on the tips of the branches where they are easy to pick. A fruit laden bush of Herbert with hundreds of berries ripening in attractive blue clusters is a sight to behold. Berries are attractive and firm, hang well on the bush without dropping. One of the best commercial varieties and a must for the home garden. Ripens late midseason or 10 days to 2 weeks after Berkley.

PRICES FOR THREE KINDS ABOVE

Prices: 3-yr., 12-18 in., \$1.75 each; 3 for \$4.95; 10 for \$13.95; 3-yr., 18-24 in., \$1.95 each; 3 for \$5.40; 10 for \$15.95.

GROW BLUEBERRIES

Enjoy these delicious fruits all summer. Early varieties start ripening in July. The later maturing kinds will produce fruit into September.

They prefer an acid soil. If your soil is alkaline add peat moss or aluminum sulphate to make it more acid. You can plant them either in the spring or fall. Space them about four to six feet apart in the row. Blueberries make a fine hedge. They are especially beautiful in the fall when the leaves turn to deep crimson. Your plants will start to bear the year following planting. A planting will last at least 25 to 30 years.

Summerlong
New
Everbearing Peach *"Summerlong"*

(Plant Patent No. 1503)

This everbearing Peach is one of Mother Nature's own creations. The original tree was found growing near Dayton, Ohio. It has been under observation for the past six years and every year its bearing habits have been the same. The first Peaches start to ripen about July 20th and continue to ripen until about September 20th. This habit of continuous bearing is something new in fruit trees. We have everbearing Strawberries and Raspberries, and now a fine new everbearing Peach. Summerlong has golden yellow flesh, medium to large fruit and freestone. The flesh is very firm, sweet and fine flavored. It is the ideal tree for the home garden because one or two trees will supply delicious fruit for the whole summer. It has all the excellent qualities of regular Peaches, yet it is hardy, requires no more care than other Peaches. Reserve a spot in your planting for this fine variety. **4 to 5 ft. trees, \$2.95 each; 2 for \$5.75.**

Howard MIRACLE PLUM

A New Improved Variety That Bears Abundantly

The "Beau Brummel" of fine Plums. Huge size, exquisite flavor, beautiful color. It has beautiful white blossoms in spring and vividly colored fall foliage. It grows rapidly and bears early. Hardy to 18 below zero.

DELICIOUS AND APPETIZING FLAVOR. All the delicious flavors of Peach, Plum, and Nectarine seem to be combined, to make this the most delightful flavored Plum of any grown. Huge fruits have amber flesh with skin so thin that it is practically unnoticeable when eaten. The most delicious Plum with the most unique pleasing flavor of any. Keeps well, delicious in preserves, fruit ripens over a long period during July and August. Beautiful ornamental tree of medium size, richly colored leaves in the fall like the leaves of a Maple. No other Plum can compare with Miracle Plum in quality. Grow it, taste it yourself, we know you will agree that this is the outstanding Plum of the century.

To insure heavier fruiting plant another variety for pollination such as Santa Rosa or Burbank. Supply limited. **3 to 4 ft. trees, \$2.75 each; 2 for \$5.00.**

TREES - Miller's Best Varieties

New *Sun Haven* *Peach*

40 Days Earlier Than Elberta

Almost everyone waits with anticipation for the ripening of the first Peaches of the season. Now we won't have to wait so long. New Sun Haven ripens 40 days before Elberta. Besides being extra early it is a fine eating Peach with a delightful rich flavor. Fruits are medium to large, bright red with yellow-gold cheek. Flesh is clear yellow and resistant to browning. Trees are large, vigorous, productive, and very hardy. No injury to the tree occurred after 19 below zero but fruit buds were damaged. Still one of the hardiest of all Peaches. Originated and introduced by Michigan State College in 1955 as one of the best of thousands of seedlings. Be the first to have ripe Peaches. Plant delicious, hardy Sun Haven.

✓ **RED HAVEN.** A new, early, freestone, yellow fleshed Peach introduced by the South Haven Experiment Station, Michigan. Almost free from fuzz, medium sized, noted for its all-over bright red color with delicious flavor of Hale-Haven and South Haven. Hangs on tree better than other Peaches even when fully ripe.

✓ **GOLDEN JUBILEE.** New, large, yellow freestone. Ripens from middle to late August. Flesh tender, fine grained, juicy, and excellent quality. The best early Peach. Excellent for canning and home use. Tree productive, hardy.

✓ **NEW RICHAVEN.** Another extra fine Peach originated at Michigan State College. A cross of Hale-Haven, Red Haven and J. H. Hale—combining the better qualities of each. Ripens 18 days before Elberta, 3 days before Hale-Haven. The most attractive fruits are nearly round, bright golden, overlaid with a bright red blush. Flesh is clear yellow, of delicious melting texture and resists browning. Entirely freestone. Trees grow large and are vigorous and extremely hardy. Withstood 18 below zero with no permanent injury to the tree. This excellent new variety is perfectly adapted for either home or orchard planting.

✓ **HALE-HAVEN.** New. Fruit is large, yellow with red cheek, freestone. Flesh firm, juicy, very sweet, and richly flavored. Ripens September 1st to 5th. Tree is very productive, hardy. One of the best canning Peaches of all.

✓ **ELBERTA.** Best known yellow canning Peach. Freestone. Fruit large, attractive, good in quality. Ripens early September. Tree hardy, productive.

**ALL PEACHES WE LIST ARE SELF-FERTILE—
NO POLLINATORS REQUIRED**

PEACH TREES

4 to 5 ft. trees, each \$1.95; 3 for \$5.70; 10 for \$16.00.

Juicy **PLUMS**

*Best Varieties for
Home and Orchard*

**PRICES—PLUM—PRUNE TREES, 2-Yr., 4-5 Ft.
\$2.25 each; 3 for \$6.45; 10 for \$19.95**

✓ **SHIRO.** The Golden Plum Everyone Loves to See and Eat. A Golden Yellow Winner. A very early Plum. Beautiful golden yellow variety. Tree is low growing, hardy, very prolific. Excellent for cooking, canning and dessert use. People who like Plums should be sure to plant this variety. Ripens August 8-15. Japanese type; plant another Jap Plum for pollination.

✓ **BURBANK (Japanese).** Fruit large, dark red. Skin thin, covered with heavy bloom. Flesh yellow, juicy, tender and sweet. Tree large, spreading, productive. Ripens late August.

✓ **SANTA ROSA.** Large, very juicy, dark reddish purple. The melting red flesh has a fine texture and delightful flavor. One of the best Japanese Plums. Trees are large, rapid growing and bear early. Ripens mid to late August.

✓ **STANLEY.** Fruit large, Prune shaped, bluish purple, very attractive. Flesh yellow, juicy, sweet, richly flavored. Tree large, spreading, productive. Bears young. We like Stanley and Fellemborg the best of all Prunes for home and commercial use. Ripens early September.

✓ **FELLEMBERG.** Fruit large, oval, purple. Flesh yellow, firm, sweet, fine grained and tender. Tree very productive, spreading, hardy. A delicious Prune for eating out of hand, canning and preserves. Ripens early to middle September.

PLUM TREE POLLINATION

Japanese Plums, Burbank and Santa Rosa, are self-sterile and need other kinds planted with them in order to produce fruit. Fellemborg and Stanley are European Plums and self-fertile (one tree planted alone will produce fruit). Plant more than one of the Japanese varieties for proper pollination.

STRAWBERRIES

GET BIGGER YIELDS

CATSKILL. Berries large, firm, glossy, dark red, quality equal to the best. Plants thrifty, vigorous. Ripens a few days after Premier. One of the best newer varieties of proven merit. Fine for freezing.

FAIRFAX (Early). A very large high quality berry. Sweetest of any variety. One of the best for freezing—rating on a par with Sparkle. Strictly a home garden berry but if you want the best for home use, and a real treat, plant Fairfax.

NEW EMPIRE. A superior midseason to late berry originated at New York State Experiment Station. Berries are huge, one customer writes that his Empire Strawberries were more than two inches in diameter. Besides being extra large they ripen over the longest season of any Strawberry other than everbearing. One of the best for home planting because of huge size, good quality and long fruiting season.

PREMIER. No variety ever introduced has received so much praise or been so widely grown. Adaptability, quality, flavor and frost-resistance are Premier features. One of the best for home garden or commercial planting.

SPARKLE (Late). Introduced by the N. J. Experiment Station and has proven to be the best late berry for the Northern States. Bears tremendous crops of large brilliant red berries that are firm, with a delicious flavor. A vigorous grower and plant maker. Free from disease. Ripens after Premier. For home use and commercial planting. One of the best for freezing.

NEW JERSEYBELLE (Late). Outstanding new variety from N. J. Exp. Sta. One of the best for home plantings. Large dark red attractive fruit with just about the finest flavor of any late variety. Very firm. Resembles Fairfax in color but of better quality.

HANSEN IMPROVED BUSH CHERRY

An ornamental shrub, producing edible fruit. Fruit is large, black, and sweet. Good to eat right from the bush. Introduced by Dr. Hansen of the South Dakota Experiment Station. The silvery green leaves turn red in autumn and the pretty white blossoms add to landscape effect in the spring. Dwarf growing, 4 to 5 ft. Can be trimmed. Usually bear fruit the first year after planting. Plant at least two bushes for better fruit production. 95c each; 2 for \$1.70; 10 for \$7.50.

GUARANTEED TO GROW STOCK

HOW TO ORDER MILLER'S GUARANTEED STOCK

(Please Read Carefully)

PREPAID SHIPMENTS

We pay shipping charges except to Oregon, Washington, California, Arizona and Canada. Include 10% extra if you live in these states. To cover red tape in processing Canadian orders we require 40% extra. We cannot ship nut trees to California or Arizona; Grape vines to Washington and Arizona. Plum, Peach, Nectarine or Almond to Washington, California, Arizona and Idaho.

MILLER'S GUARANTEE

We guarantee our stock to be first class in every respect. We will refund purchase price in full if you are not completely satisfied. We use every precaution to keep our stock true to name. If any proves untrue we will replace it free or refund purchase price in full.

FREE REPLACEMENTS

We will replace free of charge any plant purchased at catalog prices that fails to grow. You must notify us by September 1st for spring planted stock. Losses on fall planted stock must be reported by May 1st. In any case our guarantee is limited to one growing season.

SHIPPING SEASONS

SPRING—Usually starting late February to June 1.

FALL—From October 20th to mid-December.

ABOUT THE MILLERS (Reading time 1 minute)

Germany's 1860's. Grandfather Miller completes service in Prussian War. Another War in offing. That's not for him. So to the U. S. and a new life. Pioneer Grape and fruit grower on Canandaigua Lake's fruitful shores . . . Dad Miller 1872-1946. A fruit man who really had it. Thorough, intelligent, a lifetime devoted to fruit culture. The Miller boys learn fruit growing from an expert. 1936, Ed (that's me, J. E.) has an idea that folks would like some of our delicious new Grapes at home. Small nursery established to sell fruit stock by mail. 1940, Brother George joined the growing firm. We expand our line, offering a complete line of fruit stock. 1945, we acquire another 86-acre farm on Canandaigua Lake's sunny slopes. Built a new, modern office and storage. Today—still not a large nursery by present standards, but well equipped to supply the best and give you a square deal.

MILLER'S Fruit Planting and Pruning Guide

Planting Grape Vines
Digging the Hole
Dig a hole large enough to accommodate the roots without crowding. If the soil is moist, no watering is necessary. Do not place any fertilizer in the hole when planting. Do not tread the top of the ground after the vine is planted. When planting is completed, crown (C) should be even with ground level as shown at right.

How to Plant
Before planting vine fill hole with several shovelfuls of fine top soil to point X. (See above at right.) Next, cut off cane (A) and (B) and roots, and remove label, as shown at right. Then spread the roots carefully in all directions, making sure that they are well spaced. Cover the roots with several shovelfuls of fine top soil to point Y. Tread the ground firmly around the roots as in planting a tree. Finally, fill rest of hole leaving the soil loose on top. Keep out sods and large stones. Hoe around the young vines frequently during the summer to keep the soil loose, kill weeds, and conserve moisture. Cultivate after a rain rather than before. When planting space the vines 8 feet apart. If space is limited, 6- or 7 feet apart will be sufficient for home plantings.

Vine before pruning

J. E. MILLER NURSERIES
CANANDAIGUA, NEW YORK

BUY FROM THE GROWER

We are growers of high quality nursery stock. We take great pride in the plants we grow and sell. The climate here in the Finger Lake Region is ideal for producing superior fruit stock. Miller's stock is grown right, packed right, and shipped to arrive nursery-fresh. We have so much confidence in our stock and our customer's honesty that we guarantee it to grow or replace it free. Buy from the grower and save. You will get a square deal and the best stock money can buy.

SOME TIPS ON PLANTING

Plant as early in the spring as possible. Early planted stock will make almost twice as much growth the first year. Late October and early November is the best time to plant in the fall. We usually do not start shipping before October 20th so that our plants are fully matured before shipping.

It is possible to grow some fine stock on heavy soils but it is sometimes more difficult to get it started. If you have heavy clay discard it entirely and use good top soil around the roots and when filling the hole. Your plants will get off to a quick start and make a better growth.

MILLER'S FRUIT PLANTING AND PRUNING GUIDE FREE WITH EACH ORDER

Another free service to our customers to insure your success. You want top-quality fruit in the shortest possible time. We want satisfied customers. That is why we spent a great deal of time and money in preparing our Planting and Cultural guide. Pictures tell a story better than words. We explain by illustrations and simple language how to care for plants from planting to harvest. What we have learned in 75 years accumulated experience in fruit culture we pass on to you in a form that will guarantee a full measure of success.

BUSINESS HOURS

We are open Monday through Saturday from 8 A.M. to 5 P.M. March, April, May and June.

English Walnut	5 to 6 years	35 x 35 ft.

WHAT IS THE BEST FERTILIZER?

We firmly believe that there is no substitute for fertilizers of an organic nature, such as old hay or straw, compost, well rotted manure, decayed leaves. Any of these materials help loosen the soil, add organic matter and make the soil more retentive of moisture. Also growing plants under a mulch keeps the soil at a more constant, favorable temperature for plant growth.

What's **BEST** in DWARF APPLE TREES

HOW TO SELECT THE BEST TYPE DWARF TREE

We are specializing in dwarf fruit trees. We can supply dwarf Apple on both true dwarf and semi-dwarfing stock. Our dwarf Apple trees are propagated by budding the desired variety on East Malling rootstock. Malling rootstocks are designated by Roman numerals from I through XVI.

SEMI-DWARF

We recommend Malling VII as one of the best for commercial and home plantings. It makes a tree only slightly larger than the one on Malling IX, the true dwarf, but has a much better root system and produces more fruit. It is well adapted to varying soil conditions. Ultimate height about 8-10 feet. One of the best for home and commercial plantings. Does not require staking.

TRUE DWARF

Malling IX is the true dwarf and makes a tree only 6-8 feet tall when full grown. It is a valuable tree for home planting where space is limited. It has a rather brittle root system and must be staked. Trees come into bearing very early. Often the year following planting. At the time of planting it is a good plan to place a permanent stake about two inches from the trunk and fasten the tree to the stake with some soft material that will not scar or girdle the trunk of the tree.

NORTHERN SPY SEMI-DWARF APPLE

This tree is about 4 years old.

This is David Miller. David is studying Horticulture at Cornell. Brother John is now a full time nurseryman. He completed horticulture course, class '62. Both boys are intensely interested in nursery work. At an early age they learned how to propagate by budding, how to prune, cultivate and handle plants. Now they will get more technical training.

EVERBEARING SEPTEMBER Yields Fine Crops From Georgia to New York State

Two crops each year, one in June and another abundant crop in September. The early maturing fall crop insures ripe fruit every year. You'll find September easy to grow, the most disease resistant of any red berry, very winter hardy and a vigorous grower. You'll get big juicy bright red berries that are sweet and won't crumble. This new berry was developed by the New York State Experiment Station.

LATHAM—Red

Because of its heavy bearing, high quality, and adaptability to many types of soils, it is the most popular and best variety to plant. Plants are extra hardy. The large, firm berries are excellent for home use and canning. Ripens a few days after Taylor.

TAYLOR—Red

A heavy producer of large, conical, light red berries. Often over an inch long, very firm, and have the most delicious flavor of any Red Raspberry. The first berries are ready to pick by July 6th and for the next three weeks the bushes are heavy with ripening fruit. A hardy and vigorous grower recommended for home and commercial plantings.

September

Taylor

27 Years' Progress in growing **BETTER NURSERY STOCK**

First of all we want to thank our thousands of customers for making our growth possible. We are deeply grateful that your continued confidence in us has enabled us to grow steadily with the years.

Today we are proud to offer many new innovations such as new packing methods, efficient modern buildings thoroughly insulated so that we can pack and ship stock that will arrive in nursery fresh condition. Constant research to bring you new and better varieties. New improved growing methods for producing better stock, skilled nurserymen that know how to grow and handle plants. Top quality plants that are guaranteed for one season's growth and delivered free.

GROW DWARF FRUIT TREES

Enjoy the pleasure of growing your own fruit on dwarf trees. You will find that home-grown, tree-ripened fruits are much sweeter with more flavor and better quality. Grow large tasty Apples, juicy Plums, delicious Peaches, Pears, Cherries and Nectarines.

Dwarf trees are easy to grow, require little space, bear young and produce full size fruit on small trees. They're ideal for the home garden.

DOUBLE PROTECTION IN PACKING

Exhaustive research has proven that plants wrapped in new polyethylene paper will keep in good condition without drying out for 3-4 weeks. Just to make sure that not one bit of moisture is lost we pack damp sphagnum moss around the roots for double protection. We fasten a sturdy piece of bamboo in the package to prevent breakage in transit. We believe this extreme care in packing plus our high quality plants is why 98% of the plants we sell grow.

Note the well developed whole root system on this dwarf Apricot tree. Also the nicely branched top. One of the 10,000 fine dwarf trees in this field. The man holding the tree—Ed Miller.

Digging a fine block of dwarf Peach, Plum and Apricot trees. The finest we have ever grown. The digging blade must go deep to get the whole root system. We use two tractors to provide enough power. Photo. Nov., 1961.

DO NOT USE FERTILIZER IN THE HOLE WHEN PLANTING

More stock is killed by using fertilizer near the roots than any other cause. Most chemical fertilizers are quite caustic and will kill roots of newly planted stock on contact. Fertilizers such as bone meal are non-burning and can be safely used in the hole when planting and usually contribute to increased growth. Make sure your newly planted stock has plenty of water, especially during the hot dry days of summer. Newly planted stock needs water more than any other thing. Tests have proven that plants that receive water during dry periods make about twice as much growth. During dry periods use a full pail of water per plant once each week. Let it soak in slowly.

The Best in Fine Apples

Miller's Selected Apples - Listed in Order of Ripening

✓ **RED ASTRACHAN.** A tarty red Apple. Excellent for pies and cooking. Ripens mid-August. Trees bear young. One of the best early sorts.

✓ **YELLOW TRANSPARENT.** Tree grows upright, hardy, early bearer. Fruit good size. Skin clear, white to pale yellow in color. Flavor very good. Early August.

✓ **LODI.** New yellow Apple with larger fruits and better quality than Yellow Transparent. Ripens about August 10-15th. It has fine quality for an early Apple and the tree is very vigorous. A heavy bearer and hardy.

✓ **NEW WELLINGTON.** A large attractive red striped Apple that ripens about mid-August. Good quality, makes extra fine sauce and pies. Fruit ripens at one time. Originated and named by New York State Experiment Station.

✓ **McINTOSH.** Tree vigorous, bears young and is very hardy. Quality of the best Delicious aromatic flavor, beautiful, large, bright red Apple. Ripens September.

✓ **R. I. GREENING.** Noted for its fine cooking qualities. Flesh is yellow, quality good. Tree vigorous and productive. Keeps well in storage.

✓ **CORTLAND.** A improved McIntosh ripening about two weeks later. Large, beautiful dark red, flesh melting, fine grained, juicy. A superior dessert variety.

✓ **RED DELICIOUS.** See illustration page 21. A fine dessert variety. Turns completely red before ripe. Large size, wonderful quality, has a delightful aroma, and a wonderful flavor. Ripens October.

✓ **MACOUN.** A new red Apple of the McIntosh type. Better quality than McIntosh, ripens later, keeps better. Introduced and recommended by the New York State Experiment Station.

✓ **BALDWIN.** No Apple has ever been found to take the place of this fine variety. Large, round, bright red, good keeping Apple noted for its eating and cooking qualities. Ripens in October.

✓ **NORTHERN SPY.** One of our best known and most delicious Apples. Tree very vigorous and hardy. Ripens late October or early November.

✓ **YELLOW DELICIOUS.** A bright, golden yellow Apple of excellent quality. Firm, crisp, and very juicy. Splendid keeper. Bears young and heavily.

STANDARD APPLE TREES

2-yr., 4 to
5 ft., \$1.95
each; 3 for
\$5.45; 10
for \$17.00.

Idared

NEW IDARED. Large handsome fruits are a solid bright red. Delicious quality, highly flavored with crisp flesh. A fine long keeping variety that retains its firmness and flavor into late winter. Very early bearing. Trees in our nursery budded on Malling VII semi-dwarf have produced many Apples right in the nursery row. Ripens a month after McIntosh.

✓ **RED STAYMAN WINESAP.** Bright red Apple that is noted for high quality and good keeping qualities. Fruit is large, firm, highly flavored. Ripens late. Our strain is from a dark red sport, with allover red color.

✓ **RED ROME.** An improved color sport of Rome Beauty. A large winter Apple with deep red color, firm flesh and superior keeping qualities. A good quality Apple much in demand by commercial processors. Tree is vigorous and bears young.

✓ **NEW MONROE.** A new late or winter Apple originated at the New York State Experiment Station. Fruits are large, roundish-conic, with attractive bright red color. Flesh yellowish, crisp, juicy with a fine flavor. Tree upright-spreading and an annual bearer. This most promising variety is a cross of Jonathan and Rome Beauty and combines many of the best characteristics of both.

NEW SUMMER SCARLET

Summer 1955 — a meadow covered with apple seedlings mostly worthless. Among these seedlings stands a tree so covered with bright crimson fruit that it stands out at a distance of several hundred feet. The fruit is ripe. We are amazed to find such high quality in an early apple. The fruits are medium to large, shining red, firm crisp and juicy with a fine flavor. This is no ordinary apple. We decided that it should be propagated.

After growing and testing it for the past five years we think this is the finest early summer apple of all. The tree is vigorous, hardy, with healthy dark green foliage. Ripens mid August and

keeps especially well for an early apple. Plant Summer Scarlet for high quality early fruit.

2 Yr. Semi Dwarf on Mall. VII, 4-5 ft., \$3.95 each; 3 for \$10.95
2 Yr. Standard Trees, 4-6 ft. \$2.50 each; 3 for \$6.95

New
Summer Scarlet

Nanking Cherry

NANKING CHERRY

(*Prunus Tomentosa*)

Every twig is covered with Cherry-like blossoms which are a shell-pink in bud opening to pure white. In early May before the leaves unfold the whole plant is a glistening mass of white flowers. These are followed by bright red Cherry-like fruits in tight clusters which add striking color and can be used to make tasty pies and jam. Very hardy. Will survive and produce after the coldest winters. A fine shrub with attractive, clean foliage. Plant two for proper pollination. Grows 8-10 feet tall. 18-24 in. plants, \$1.65 each; 2 for \$2.95.

GARDEN FAVORITES that Bear Quickly-Require Little Care

New PIXWELL GOOSEBERRY

You'll want to grow this new practically thornless Gooseberry that makes such delicious pies, and tasty preserves. It produces a heavy crop of fine quality berries. Attractive light green at first, they turn pink when fully ripe. It "picks well" because the fruit hangs on slender stems an inch below the branches where they can be quickly and easily picked. Very hardy, it does well on any average soil. Our two-year plants

will bear the next year after planting. The colorful foliage makes it a very attractive ornamental plant as well as a valuable producer of delicious fruits. **2-yr., No. 1 plants, \$1.25 each; 2 for \$2.25.**

IMPORTANT: When ordering Gooseberry or Currant plants, it is necessary to have the following information:

1. County and Township where planting is to be made.
2. Approximate distance from nearest stand of White Pine (Five-Needled Pine.)

If you do not receive the Currants and Gooseberries with your order, you will know we are holding them for the permit. If the permit is not granted, refund will be made.

CURRENTS

RED LAKE. A new variety with large, large red berries on long well filled stems. Very hardy and productive. Bears over a long season, July 1st to 20th. **2-yr. bushes, 90c each; 3 for \$2.45; 10 for \$6.95.**

Beach Plum Makes Delicious Preserves

Miller's

BEACH PLUM Bushes

18 in. to 24 in. Plants \$1.95 each

Beautiful white blossoms tightly cover the branches in the spring. These develop into colorful fruits that make delicious jams and jellies. Fruit may be bluish purple, red, or yellow and is ripe in September. It grows well on the poorest soil and is extremely hardy. Once established it will withstand prolonged droughts, sub-zero cold and most diseases. Can be grown as a shrub or a small tree by selective pruning. Usually starts bearing year after planting.

HARDY DELICIOUS NECTARINES

Standard Size Trees

Nectarines have a delicious flavor very much like a Peach. Fruit is smooth skinned like a Plum, but resembles Peach in shape and size. Leaves and growth habits are the same as a Peach and require the same culture and care.

NEW NECTACREST. Nectarines are one of our most delicious fruits but New Nectacrest developed at the New Jersey Experiment Station is by far the best of any. It has the sweetest flavor of any we have tasted, combining all of the best flavors of a Peach. Medium to large size fruits are most attractive with bright red cheeks shading to pink. The white flesh comes free from the pit and has a fine texture with the most delightful flavor blends. Tree is hardy and vigorous and as easy to grow as a Peach. Hardy to 10-15 below zero. Self-fertile, one tree will produce abundantly. Standard trees grow to about 12 feet. Ripens September 1st to 10th. Enjoy a new adventure in fine eating. Plant New Nectacrest. **Prices: 4-5 ft., \$2.50 each; 2 for \$4.75.**

Nectacrest Nectarine

PLANT A HARDY AMUR RIVER PRIVET HEDGE

Makes a clean, trim looking hedge with clean, glossy green leaves and attractive, upright growth. Hardy even in the coldest locations and does not freeze back to the ground after cold winters like California Privet. Grows to about eight feet but can be pruned to any height desired. Grows well on almost any type soil and is almost evergreen, retaining its waxy green foliage almost all winter. **18-24 in., 25 for \$5.95; 50 for \$11.95; 100 for \$24.00.**

SWEET CHERRIES

Cherries Grow Rapidly—Bear Young—Ornamental

Sweet Cherries should be planted as early in spring as possible. They will not survive late plantings if weather conditions are unfavorable.

IMPORTANT. Cross-pollination is essential with all Sweet Cherries. Always plant two or more kinds together to insure proper pollination.

BLACK TARTARIAN. A large, black meaty Cherry that is well known everywhere for its sweet flavored fruit. Tree vigorous and a heavy bearer. Ripens middle to late June.

NEW EMPEROR FRANCIS. This new Sweet Cherry is rapidly gaining recognition as a superior variety to many older White Oxhearts. It resembles Napoleon in size and color but fruit has darker, richer color and is more firm and meaty and the flavor is really outstanding. Ripens a few days to a week earlier than Napoleon.

PEAR TREES

*Delicious—Easy To Grow—Best for
Home Grounds*

STANDARD PEARS

CLAPP'S FAVORITE. Large yellow Pear with red cheek. Flesh juicy, fine texture, sweet with fine flavor. Tree is hardy and productive. Ripens middle to late August.

BARTLETT. Fruit large, yellow, juicy, highly flavored. Unexcelled for canning. Tree vigorous and very productive. Ripens late August.

SECKEL. Fruit small. Best quality of all Pears. Exceptionally sweet, juicy, delicately flavored. Coppery red to golden brown. Tree is rather a slow grower but very hardy and productive. Ripens September 1st.

BEURRE BOSCH. A large gourd-shaped Pear, russet-bronze in color. Quality of the best, sweet, rich, fine grained, with fine flavor. One of the best long keeping varieties. Tree hardy, productive. Ripens late September.

2-yr., 4-5 ft., well branched trees with fine roots, \$2.45 each; 3 for \$6.45; 10 for \$19.95.

The BEST PIE CHERRY **LARGE MONTMORENCY**

The finest sour or pie Cherry. The fruit is extra fine in flavor and its brilliant red flesh is very appealing to the eye. A heavy annual bearer. As a superior variety for making those delicious pies and preserves plant Montmorency. Self-fruitful, requires no pollinator. **Prices: 2-yr., 4 to 5 ft., \$2.25 each; 3 for \$6.00; 10 for \$18.50.**

NAPOLEON. A beautiful yellow Cherry with a bright red cheek. Flesh is firm, juicy, very sweet and fine flavored. Bears heavily. An excellent canning variety. Tree is vigorous, well shaped. recommended for commercial and home planting. White Ox-heart type.

SCHMIDT'S BIGARREAU. An extra large Cherry with a deep, rich mahogany color. Flesh dark, fine grained, tender, with a pleasing sweet flavor. Fruit grows in clusters. Tree vigorous, very productive. Ripens in July.

WINDSOR. One of the best quality dark Cherries. Large, juicy and firm, one of the best, if not the best, for canning and eating out of hand. Tree is rapid and upright grower. Ripens July 15th-20th.

Bartlett

NOTE: Pears require cross-pollination. Plant 2 or more different varieties.

APRICOTS

EARLY GOLDEN. A smooth, fuzzless Apricot of medium size. Color pale orange; freestone, highly flavored and of the best quality. A fine variety to plant with Moorpark. Ripens mid-August. Apricots are not difficult to grow and the fruit is highly prized for making preserves, canning, and home use. The trees are also very ornamental, producing a mass of white blossoms in early spring.

MOORPARK. A very large, attractive Apricot with a red cheek. Best quality and richest flavor of all Apricots. Tree hardy and productive. Ripens early August.

APRICOT PRICES

2-yr., 4-5 ft., each \$2.10; 3 for \$5.95.

New MAX-RED BARTLETT PEAR

(Plant Patent No. 741)

Everyone likes the well known Bartlett for its fine flavor and high quality. Max-Red is even better. It contains 10% more sugar by actual test and still retains all of the delicious flavor of Bartlett. This new Pear was discovered as a bud sport growing on a Bartlett tree. A bud sport is where a distinctly different fruit is produced on one branch of a named variety, in this case Bartlett. Max-Red with its bright red color is much more attractive than Bartlett. The added 10% more sugar combined with the delicious Bartlett flavor make it an outstanding new Pear. The tree grows rapidly and with us has started fruiting the third year after planting. Plant another variety with it for pollination. Either dwarf or standard Clapp's Favorite is an excellent pollinator. Winter hardy to 20 below zero. 2-yr., 4-5 ft. branched trees, \$2.95 each; 2 for \$5.75.

New COLETTE EVERBEARING PEAR

(Plant Patent No. 1401)

A New Addition to the Pear Family. Colette Pear bears fruit of such superb quality that even without the unusual bearing habit it would be worthy of a place in every garden. The first fruits are about the size of a Bartlett with rich, waxy color with pink cheeks. First fruit ripens about August 25th and is followed by a continuous succession of fruit until the fall freezes catch the remaining unripened fruit.

RICH FLAVOR — FIRM FLESH. The rich aromatic, spicy flavor and the fine, firm, white flesh, entirely free of grit, give this Pear eating quality without equal. Fruit is firm with a delightful fragrance. Eating quality is as good as any Pear grown. Canned Colette Pears have a rich aromatic flavor that is superior to any other Pear.

Tree grows broad, short and shapely. Very hardy and a fine tree for the home garden. Enjoy Pears from August until November. Plant Colette. Prices: 4 to 5 ft. trees, \$3.25 each; 2 for \$6.25.

DWARF NECTARINE-NECTACREST

Nectarines are one of our most delicious fruits but New Nectacrest developed at the New Jersey Experiment Station is by far the best of any. It has the sweetest, finest flavor of any we have tasted, combining all of the best flavors of a Peach. Medium to large size fruits are most attractive with bright red cheeks shading to pink. The white flesh comes free from the pit and has a fine texture with the most delightful flavor blends. Tree is hardy and vigorous and as easy to grow as a Peach. Hardy to 10-15 below zero. Self-fertile, one tree will produce abundantly. Will grow 6-8 ft. high. Ripens September 1st to 10th. Enjoy a new adventure in fine eating. Plant new Nectacrest. Prices: Dwarf trees, 3-4 ft., \$3.50 each; 2 for \$6.70.

New

A Miller Specialty

New DWARF PEACH TREES

Picture a symmetrical little tree loaded with luscious full sized Peaches. One that never will grow taller than 6-7 feet. A beautiful ornamental, covered with soft pink flowers in the spring. That's the new Dwarf Peach which we bud on a special rootstock. Trees on this stock always retain a dwarf form, are hardy, and make a shapely, long lived tree. You can plant them as close as 8 feet apart. Yield is slightly more than a half bushel per tree when full grown, and the fruit is better colored and slightly larger than standard trees. These little trees are easy to care for and you can pick all the fruit from the ground without a ladder. Best of all you don't have to wait long to get fruit. They usually start bearing the next year after planting. 3-4 ft. trees, \$3.25 each; 2 for \$6.25.

DWARF PLUM TREES

Grow delicious Plums on small compact trees. Plant them as close as 8 feet apart. They will only grow 9 feet high yet will yield more than a half bushel of fruit. Fruit is usually larger than on standard size trees. They begin to fruit second year after planting and are easy to grow. One of our dwarf Burbank trees produced a bushel of fruit this year on a tree 6 ft. high. Our trees are budded on Prunus Besseyi, a special dwarfing stock. They are winter hardy to 18 below zero. Dwarf Stanley will produce full crops after 30 below zero. Plant them in the home garden. Enjoy the beautiful white blossoms in spring and delicious fruits in the fall.

DWARF PEAR TREES

These small trees often bear fruit the first year. One customer tells us his dwarf Bartlett produced 17 Pears just four months after planting. While this may be a little unusual they always bear the second year if planted on good soil and given average care.

Our dwarf Pear trees are propagated by budding on Quince roots. This is the only known method of producing dwarf Pear trees. Not all varieties do well on Quince roots. We are listing the four varieties that make a good union with the stock and are productive. Plant them 10 feet apart. Ultimate height 8 to 10 feet.

Dwarf Bartlett Pear Tree

GROW FULL SIZE FRUIT ON DWARF TREES

Practical—Ornamental—Early Fruiting

"5 IN 1" DWARF APPLE

Five of our best Apple varieties are budded on a single tree to give you tasty, tree ripened fruit over the entire Apple season. The five varieties provide perfect pollination so you are sure of having good crops of fruit every year. The trees start to bear the first or second year after planting and continue to bear for years to come. Makes a nice ornamental with clouds of pretty white blossoms in spring and colorful, delicious fruit from summer to late autumn. A distinctive small tree for the lawn or for the back yard or garden. These small growing trees require little space. You can plant them 10-12 feet apart and they will grow to about 8-9 feet high. They are easy to care for and most of the fruit can be picked from the ground without using a ladder. Fruit on these dwarf trees is usually larger and better colored than on a standard tree and they are hardy enough to stand extreme cold.

Five choice varieties on each tree. Red Delicious, McIntosh, Cortland, Yellow Transparent, Northern Spy.

2-yr., 4-5 ft. branched trees, \$4.75 each; 2 for \$9.25.

3-IN-1 DWARF PEAR

Dwarf Pears fruit the earliest of any dwarf tree. They often will produce fruit the year after planting. Pears are self sterile. Two different kinds must be planted to insure pollination and full crops of fruit. When you plant 3-IN-1 DWARF you need only plant one tree. The three varieties on each tree provide perfect pollination. These compact productive trees grow to about 8 ft. tall. Most of the fruit can be picked without a ladder. Winter hardy to 18 below zero. A mass of pinkish white blossoms in spring followed by delicious fruit from August to October. Varieties on each tree, BARTLETT, CLAPP'S FAVORITE and DUCHESS.

2-yr., 3-4 ft. trees, \$5.95 each; 2 for \$11.50.

DWARF ORANGE QUINCE

Makes Fine Jelly—Delicious Sauce

The best variety available today. Fruit large, golden yellow. Bears abundantly every year. Because of its dwarfing characteristics, it requires only a small space. May be grown either as a tree or in bush form. Its unusual large white blossoms increase its value as a distinctive ornamental specimen.

2-yr., 4-5 ft.

\$3.25 Each 2 for \$6.25

DWARF APRICOTS

Here is a valuable new addition to our growing list of dwarf fruit trees. Now we are growing Dwarf Apricots. These are budded on a hardy dwarfing rootstock that limits the size of the tree to about 8 feet in height. You can plant them as close as 8-10 feet apart. In the spring hundreds of showy, pinkish white blossoms cover the tree making it a most attractive ornamental. Dwarf Apricots usually start to bear the second year after planting and the full sized golden yellow fruits ripen in midsummer. These sturdy, compact trees are ideal for planting in the home garden or where space is limited.

EARLY GOLDEN AND MOORPARK

3-4 ft. trees, \$3.50 each

New GOLDEN GEM APRICOT

The parent tree stands near Lake Ontario close to Rochester. A fruit grower friend that has been a most successful orchardist showed us this tree. He told us that he had tested more than 20 varieties of apricots but this was far and away the best. This unusual tree is on property formerly owned by him and still under family ownership. Thus it has been under observation for a long time. Estimated age of this tree 40-50 years. Still sound and vigorous, no sign of decay or dead limbs. The winter of 1934, coldest on record in New York, killed practically every apricot tree. This one not only survived that winter but many others almost as severe. Two years ago we cut buds from this tree and started propagating trees for our customer-orchardist. Since then we have increased propagation to the point we can offer it to our customers. The Fruit is most attractive. Large 2-2½ in. fruits are golden yellow with bright orange tint. Deliciously sweet with sprightly delicate apricot flavor. Tree is most productive. Produces large annual crops. Just about the best apricot anyone could hope to find.

Available dwarf trees only. 3-4 ft., \$5.50 each. SUPPLY EXTREMELY LIMITED.

APRICOT POLLINATION

The varieties we sell are self fertile. However, planting two different varieties will often increase fruit production.

DWARF NORTH STAR CHERRY

This new dwarf Cherry is so hardy it will succeed farther north than any other Cherry. It is a cross between a very hardy Siberian Cherry and the well-known English Morello. The fruit is large to very large, clear bright red, with tender skin and a rich full flavor. Fine for eating and makes delicious pies. The original tree growing near Minneapolis has never failed to bear from the time it was planted some years ago. It is self-fruitful and very hardy. No injury was observed and it produced a full crop after 25 below zero. Ripens from mid to late July. Though the original tree is little more than 6 feet tall it has always produced a heavy crop of top quality fruit. You will like these well formed shapely trees that add so much to a fruit planting. **2 to 3 ft. trees, \$3.25 each; 2 for \$6.25.**

Beautiful BLUEBIRD

Completely new. No variety can compare with the flawless blue of this new Althea. Gardeners will welcome this glorious newcomer to the small but choice list of colorful, all-summer-flowering shrubs. Its large, 5-inch flowers stand out like pert saucers. Stunning in shrub plantings or as a specimen. Bluebird is vigorous in growth and upright in habit. One of the few shrubs that bloom with such unrivaled beauty from early summer until frost. Grows in compact, symmetrical form to about 6 feet. It is as hardy as the other Altheas. Plants set this spring will bloom profusely this year. **Strong, grafted, 2-yr. plants, 12-18 in., \$2.75 each. 18-24 in., \$3.25; 2 for \$6.25.**

Bluebird

These are all top rated varieties named on the recommended list by a panel of Lilac experts. Varieties illustrated above: Top, Leon Gambetta; then left to right, Pres. Grevy, Edith Cavell and Chas. Joly.

Beautiful FRENCH LILACS

Colorful, double flowers of incomparable fragrance. These improved hybrid types do not sucker or spread but make an extremely well formed plant 8-10 feet tall. Few flowers can offer such sweet scented, rare fragrance and lovely soft shades with flower panicles 8-12 inches long. The kinds we sell are all double flowered and the plants usually bloom the first year with increased bloom each following year. They are most desirable for lawn specimens, corner groups and fine flowering hedges when planted 5 feet apart and trimmed to the desired height.

LAVENDER—Leon Gambetta. Strong grower, sparkling fresh color with double fragrant flowers.

BLUE—Pres. Grevy. Soft blue lovely flowers in large clusters. One of the best.

WHITE—EDITH CAVELL. Pure double white flowers in large clusters.

REDDISH PURPLE—Chas. Joly. Beautiful dark wine colored panicles, very fragrant, large double flowers.

Strong, 18-24 in., \$1.75 each; 2 for \$3.25.

Cardinal Shrub

CARDINAL SHRUB

(Weigela Vaniceki)

Starting in May this unique plant stages a glamorous show of breath-taking color. Many hundreds of trumpet-like flowers clothe the plant in brilliant cardinal-red from top to bottom. After this first mass of bloom lesser numbers of flowers appear as sparkling jewels against the deep green foliage until frost. Cutting flowers for bouquets makes for more abundant flowers later in the season. Grows well in sun or shade and makes a shapely, attractive bush about 6 feet tall. Perfect for an untrimmed hedge or screen. Grows well in most every part of the country. Hardy at 15 below zero. For that splash of color that will make your garden outstanding, plant Cardinal Shrub. Plants set in the spring will bloom this season. **Strong, vigorous plants, 2-3 ft., \$1.95 each; 2 for \$3.75. 18-24 in., \$1.75 each; 2 for \$3.25.**

SHRUBS For Years of Radiant Color

Blue Hydrangea

Royal Purple Smokebush

Cherokee Chief Dogwood

Beautify Your Home With ORNAMENTAL TREES

Beautiful BLUE HYDRANGEA

(Nikko Blue)

This new hardy strain grows immense flower heads 6-12 inches across. The flawless blue flowers make it one of the most strikingly beautiful of all shrubs. It grows best in full or partial shade and makes a well rounded shrub 3-4 ft. tall. On alkaline soil flowers are pink but can be easily changed to blue by watering twice each month during the summer with a tablespoon of aluminum sulphate dissolved in a gallon of water. Where temperatures go below zero mound the plants with 10-12 in. of soil before severe freezing occurs. **Heavy, 2-yr., No. 1 plants, \$1.75 each; 2 for \$3.00.**

HOPA FLOWERING CRAB

From early spring until freezing weather this tree will be a delight to you. In the spring the expanding foliage is bronzy red, but before the leaves are fully developed the whole tree bursts into bloom, being completely covered with the most magnificent fragrant pink flowers. It is hard to imagine anything more showy. After blossoming hundreds of miniature bright red fruits cover the tree and these not only create fall color interest but make fine jelly. **3 to 4 ft., \$1.95 each; 4 to 5 ft., \$2.25 each.**

ROYAL PURPLE SMOKE BUSH

A new color scheme for an old garden favorite. Deep purple leaves with cloud like feathery blooms make this a most unusual and beautiful shrub. Blooms from mid July until October. The purple leaves are even more beautiful in the fall when changing colors make it a riot of color. Can be grown as a shrub or trained to tree form. About 8 ft. tall at maturity. Hardy to 20 below zero. This rare plant just imported from Europe. Enjoy its unusual beauty in your garden or lawn planting.

18-24 in. plants, \$2.95 each.

Double Mock Orange

DOUBLE MOCK ORANGE

(Philadelphus Virginal)

Double, pure white blossoms two inches or more in diameter with the most exquisite fragrance cover the branches of this exceptionally fine shrub. Grows to about six feet and can be pruned as desired. Hardy in the coldest winters and grows well on almost any type soil. No plant can quite equal the sweet smelling fragrance or beauty of the snow-white flowers. **2-3 ft., \$1.50 each.**

LOMBARDY POPLAR

Good for Wind Screens

Tall, fast growing, spire-like tree. Adapted to wide range of soils. Ideal for screening, windbreaks, and backgrounds. When used for these purposes, plant 5 to 6 ft. apart. **5 to 6 ft., each \$1.25; 10 for \$9.50.**

WHITE DOGWOOD

(Not Illustrated)

One of the loveliest of trees. Conspicuous flowers, appearing early in the spring, are 3 to 3 1/2 inches in diameter. A Dogwood makes a beautiful lawn or shrub border specimen. 15 feet. **3-4 ft. trees, \$2.95 each; 2 for \$5.50.**

Lombardy Poplar

NEW MORaine LOCUST

(Plant Patent No. 836)

Beautiful vase-shaped in form. Very vigorous, fast growing tree, seedless, thornless. Absence of seed pods and the quick crumbling of the Moraine Locust leaves eliminates raking and piling leaves. The dark green, lacy foliage makes plenty of cool shade but allows enough sunlight to filter through so that grass grows well. It is not susceptible to disease and will grow well in spite of smoke. Does well on all kinds of soil. Its hard wood will not break under strains of wind and snow. For trouble free permanent beauty, plant this new outstanding tree. **5 to 6 ft. trees, \$6.00 each.**

Moraine Locust

Cherokee Chief **RED FLOWERING DOGWOOD**

New • Different • Outstanding

Once in a great while, the wonderful workings of nature produce a truly outstanding plant possessing the good traits of its parents and further endowed with beauty and merit far beyond that of its predecessors. Such a plant is "CHEROKEE CHIEF." Colorful blooms before leaves appear in spring, luxuriant green foliage all summer turning bright scarlet in fall, bright red berries in fall and early winter, plus an interesting branching habit makes the flowering Dogwood one of America's most handsome trees with a special interest for every season of the year. Blooms a beautiful deep red. **2-3 ft., \$4.50 each.**

ORNAMENTAL SHADE TREES

CUT LEAF WEEPING BIRCH

Graceful weeping branches and clean white bark make this one of our most beautiful ornamental trees. Even in winter, without foliage, the delicate pendulous branches make a lovely silhouette. While it is not too particular as to soil, it prefers a moist location and a sunny spot. About 35 ft. at maturity. **5 to 6 ft., \$3.95 each.**

Cut Leaf Weeping Birch

GOLDEN CHAIN TREE

(Laburnum Vossi)

Glistening golden yellow flowers in long, 12- to 18-inch clusters much like Wisteria cover this rare, beautiful tree. Starts blooming late May and for two weeks this low growing tree is a cloud of golden yellow. Grows well in full sun or partial shade. Unusual Clover like leaves and decorative green bark add to its attractiveness. Grows to 15-20 ft. Hardy in zone 5 (10-20 below zero). We recommend spring planting only. **2-yr., 4-5 ft. trees, \$4.50 each; 2 for \$8.50.**

Golden Chain

Wisconsin Weeping Willow

Spectacular New Color. SUNBURST is the first new color in a hardy ornamental shade tree in years. Branch tips of bright golden yellow, shading to bronze at the ends, contrast sharply with the rich green inner foliage to make it look like a flowering tree bursting with bloom. SUNBURST keeps this beautiful spring appearance all summer long.

No Maintenance Problem. Producing only male flowers, SUNBURST is **absolutely seedless** and causes no ground litter. The small leaves of SUNBURST, when shed, disappear in the grass, eliminating the necessity of raking. **4-5 ft. branched, \$5.95 each. 5-6 ft. branched, \$6.65 each.**

New SHADEMASTER LOCUST →

Pl. Pat. No. 1515

**THE TREE OF TODAY
UPRIGHT - THORNLESS -
FAST GROWING**

For many years there has been a growing need for a new and better fast growing shade tree. SHADEMASTER was selected as the best from over 20,000 seedlings tested. It has a straight, strong trunk. Requires no staking. Graceful upright branches. Heavy, lacy, dark green foliage that holds until late in the fall. No raking leaves. They are small and just disintegrate. Roots grow deep and will not heave walks. Grass grows well under the tree right up to the trunk. Transplants easily and most drought resistant.

GET QUICK SHADE—Shademaster is just about the fastest growing of any good hard wood shade tree. In a test trees that have been planted six years have reached 20-25 ft. in height. If you are a new homeowner and need shade quickly Shademaster is the tree to plant. It's a tree of grace and beauty and free from disease too.

5-6 ft. tree, \$5.95 each; 2 for \$10.95.

WEeping WILLOW

There are few trees that can be used to such advantage for cheery winter effects. Grows fast, adapted to a variety of soils and uses. Is very hardy, and beautifully effective near pools, along drives and on lawns. Grows 25 to 30 ft. tall. **5 to 6 ft., each \$2.75; 2 for \$5.25.**

 **New Sunburst Thornless Locust**

Shademaster Locust

NEW CRIMSON KING MAPLE

(Plant Patent No. 735)

A beautiful tree to brighten your home landscape. Each spring the sparkling crimson leaves unfold for another season's breath-taking color. Crimson King is a form of the familiar Schwedler Maple but unlike it in that the bright red leaves retain their crimson color the whole season. In 10 years of testing it has always kept its rich coloring. Makes a perfect round, symmetrically shaped tree of 25 to 40 ft. at maturity. **5 to 6 ft. trees, \$5.95. 4 to 5 ft. trees, \$4.95.**

New Crimson King Maple

FLOWERING CHERRY KWANZAN

Each spring when the Flowering Cherries bloom at Washington, D.C., people marvel at this beautiful display of color. Why not duplicate this in miniature on your lawn by planting several of these distinctive flowering trees. They are easy to grow, hardy and grow in stately form. Dainty, double, rosy pink flowers cover the tree, and the pink loveliness of the blossoms is of unequaled beauty. Grows 15-20 ft. and trees planted this spring will bloom next year. **4-5 ft. trees, \$3.95 each.**

White Clump Birch

WHITE CLUMP BIRCH

In naturalization, or as a lawn specimen, this lovely, multiple-stemmed tree is most effective. The white bark of its three or more trunks adds great charm to the landscape picture. Growth is gracefully upright with horizontal branches. Reaches a height of 30 to 35 ft. **3-4 ft. trees, \$3.00 each.**

Kwanzan Flowering Cherry

MOUNTAIN ASH

**Lovely Berried Tree
Attractive to Birds**

The drooping clusters of brilliant, orange-red berries contrasted against the beautiful soft green leaves make this a most distinctive ornamental tree. Hardy and well adapted to all conditions. 18 to 25 ft. **4 to 5 ft., \$3.50 each.**

Mountain Ash

Flowering Crabs **AMERICA'S MOST BEAUTIFUL FLOWERING TREES**

They equal or surpass the Japanese flowering Cherries in brilliance and beauty of their flowers. Beautiful in bud and flower with colorful summer foliage and showy fall fruits. Extremely winter hardy they are not particular as to soils. They grow well even on poor soils. Plant them everywhere, as a specimen lawn tree, in the border or for an attractive hedge or screen.

STRATHMORE PYRAMIDAL FLOWERING CRAB

A beautiful new pyramidal type Flowering Crab that grows in a graceful upright form. Vivid red flowers transform this tree into a pyramid of breath-taking crimson color. The fine attractive leaves are a beautiful reddish color all summer. In the fall the leaves turn to shades of bright orange and scarlet. After the leaves fall hundreds of miniature purplish red Apples cover the tree like shining jewels. These hang on into early winter and are a favorite food of birds. Strathmore blooms the first year and every year. Far superior to the Crabs that bloom in alternate years. Grows 10-15 ft. tall which makes it ideal for a flowering hedge or screen. A fine specimen tree for unusual color effect or for corner plantings. Extremely hardy, will stand 30 below zero.

	Each	2 for	10 for
2-yr., 3-4 ft. branched trees	\$2.85	\$5.20	\$22.50
2-yr., 4-5 ft. branched trees	3.25	5.95	26.00

Strathmore

Rainbow Flowering Crab Tree

NEW RAINBOW FLOWERING CRAB TREE

Prettier than a rainbow. Five different varieties of flowering crabs budded on one tree. Produces five distinctly different blooms. Each one is outstandingly beautiful by itself. Combine them together on one tree and you have a splashing display of color of unequalled beauty. Grows 12-15 ft. high. Blossoms every spring, even after the coldest winters. Makes a good growth on practically any type soil. Easy to transplant. Plant on the front lawn or back yard. Wherever you plant you can point it out with pride as your most colorful tree.

4-5 ft. Trees, \$3.95 each.

Red Silver

ALMEY FLOWERING CRAB

New Fiery Crimson Sensation

Glistening fiery crimson blossoms as large as silver dollars cover the branches to the tips. One of the most beautiful flowering Crabs in America. In addition to the spring show, autumn brings another spectacle of beauty. After the leaves fall the small scarlet fruits cling to the branches, creating another high spot of color into the winter. Almey has very early blooming habits. The trees start to bloom in the nursery row and you can expect blossoms the year after planting. Grows to 12 to 15 feet in height. Will grow and thrive on poor soil and is very hardy. A beautiful tree for small gardens or any spot that needs a show of brilliant color.

2-yr., 3 to 4 ft. trees, \$2.50 each;
2 for \$4.75; 2-yr., 4 to 5 ft. trees,
\$3.25 each; 2 for \$6.25.

RED SILVER

Blooms in early May with a vivid burst of gleaming China-rose-red blooms. Rivals the best flowering Cherries in breath-taking beauty. Red-silver leaves all summer are followed by colorful red fruits in the fall. A tree of brilliant all-season color. The tips of the new leaves as they unfold are streaked with silver but the overall color is purplish red. This unique color combination makes it most attractive. Winter hardy to 30 below zero. Grows well even under adverse conditions. Grows 15-20 ft. tall.

	Each	2 for
2-yr. 3-4 ft. trees	\$2.25	\$3.95
2-yr. 4-5 ft. trees	2.75	4.95
